1. Introduction

The objective of this Software Requirements Specifications (SRS) document is to provide an insight on “Property Buy and Sell Website”. This document includes the business preposition of the project, the functional / non-functional requirements and the well-structured architecture diagrams for better understanding of the design. In addition to this, detailed project work schedule is mentioned in the subsequent sections where in project timelines along with the sprints are mentioned.

From the business perspective, the “Property Buy and Sell Website” is web portal for those potential users who are in the search of a scout for any kind of property like student apartments, residential or commercial. The website is having dynamic content which has the intended updated information. From the sellers’ end, this web portal is a platform to showcase the respective on sale/rent accommodations/land/real estate deals to the customers. This will help in direct contact and negotiations between the buyers and sellers.

1.1 Purpose

The purpose of the SRS document is to provide a deep dive regarding this project, ranging from the intended business goals, requirements, user interfaces and software/hardware constraint and dependencies. From the project team and client/stakeholders’ perspective, the SRS details out the SDLC plan and project timelines with the expected deliverables.

1.2 Scope

This “Property Buy and Sell Website” will be of great utility to the real estate line of business where buyers always struggle a lot to get the right property of their choice and need. Also, it should be in their budget. On the other hand, the seller always strives to pitch in the best price for his property and always wants a higher priority in terms of the showcase to the customers. So, this website project will basically designed to create a “Win-win” situation for both seller and the buyer through credible information (deals) and also by making the website user friendly with content that is easy to understand.

However, this website is purely based on fictional and mocked up data/information. The emails and sms notifications have a pre-defined template. It is not a real time/dynamic website. This website is not having any dedicated application for mobile/tablet devices (e.g. Apple Store or Google play). This project targets the audience which is related to or dealing with property matters. The detailed requirements will follow through in the subsequent sections of this SRS.

1.3 Definitions, Acronyms, and Abbreviations

Term	Definition
FAQ	Frequently Asked Questions
Seller	An individual/organization that posts the property details on the website for rent/sale purposes.
Software Requirements Specification	A document that completely describes all of the functions of a proposed system and the constraints under which it must operate. For example, this document.
Stakeholder	Any person with an interest in the project who is not a developer.
User	A person that is looking for a property type on rent/sale.

1.4 References

1.5 Overview

The remainder portion of this document will talk about the general description of the project including project perspective, user characteristics, system environment, general constraints and assumptions/dependencies of this project. The section-3 provides details of specific requirements which include external interface requirements, functional requirements, non-functional requirements, design constraints and other requirements if any. The section-4 provides details about design and development details. This will include which software process model is implemented for this project along with the project timelines and detailed sprint plans.

2. General Description

The “Property Buy and Sell Website” is a web portal for those potential users who are in the search of a scout for any kind of property like student apartments, residential or commercial. The website is having dynamic content which has the intended updated information. From the seller’s end, this web portal is a platform to showcase the respective on sale/rent accommodations/land/real estate deals to the customers. This will help in direct contact and negotiations between the buyers and sellers.

2.1 Product Perspective

The following is the high-level specifications (scope) of this project:

1. To allow the user to search for potential properties of any kind for rent/buying purpose.
2. To allow the user to have access to complete details of any property.
3. To allow user to negotiate/contact the potential buyers directly.
4. To allow user for posting queries regarding any property information.

5. To allow buyers to post their property details on the website with high visibility.

2.2 User Characteristics

This project targets the audience which is related to or dealing with property matters. For example, the real estate organizations or the agents who are dealing with land, houses and commercial properties. This website gives a wide platform to advertise, buy and sell, rent a commercial property or a residential property. The basic qualification and pre-requisite of the users should be that they are well versed with operating a computer, internet and website browsing.

The following are the intended users of the website which will affect the specific requirements:

- Seller: A person that posts the property details on the website for rent/sale purposes.
- Customer/ User: A person that is looking for a property type on rent/sale.

2.3 System Environment

This website has the following system environment requirements:

Platform: Windows

Browsers (Java and Java Script compatible browser): Google Chrome, Mozilla Firefox, IE

JAVA IDE: Eclipse

Database: MySQL

2.4 General Constraints

The following are the general constraints for this website:

- Business Constraints: There is no prior business domain knowledge transformation session held, before developing this website. The knowledge pertaining to real estate property management is somewhat limited.
- Technical Constraints: This website will be focused only for desktop users. There is no dedicated application for mobile/tablet users.
- Project Team Constraints: The project team consists of members who have primarily worked as testers and system analyst. There is not much expertise in the development front, in the project team.

2.5 Assumptions and Dependencies

The users are expected to have basic domain knowledge about the real estate line of business. They should be well versed with the operations of a computer and internet.

3. Specific Requirements

The following are the specific requirements:

3.1 External Interface Requirements

3.1.1 User Interfaces

This section is not applicable for this project.

3.1.2 Hardware Interfaces

“The System must run over the internet, all the hardware shall require to connect internet will be hardware interface for the system. As for e.g. Modem, WAN – LAN, Ethernet Cross-Cable.”^[1]

3.1.3 Software Interfaces

Platform: Windows/Linux/iOS

Browsers: Google Chrome, Mozilla Firefox, IE

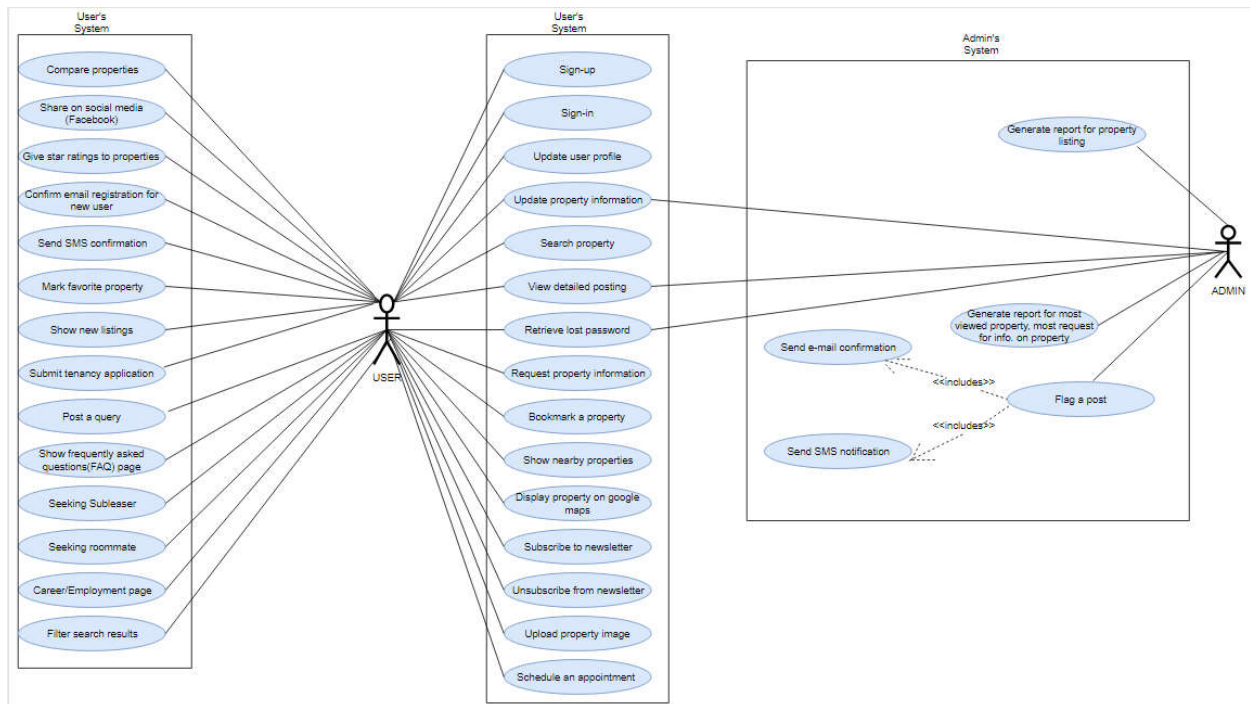

Database: MySQL Workbench 6.3

3.1.4 Communications Interfaces

This section is not applicable for this project.

3.2 Functional Requirements

Below is the use case diagram for this website:

3.2.1 Sign-in User

3.2.1.1 Description: User can sign in with a valid username and password for successful login

3.2.1.2 Actor(s): User who has already registered.

3.2.1.3 Conditions

3.2.1.4.1 Pre: User must have a valid user name and password.

3.2.1.4.2 Post: User will log in and navigated to homepage.

3.2.1.4 Related Use Case: N/A

3.2.2 Sign-up/Register User

3.2.2.1 Description: User can register or sign up by creating a new account by filling the details like personal info, occupational info etc.

3.2.2.2 Actor(s): User who has not already registered.

3.2.2.3 Conditions:

3.2.2.4.1 Pre: User should not be registered to this website.

3.2.2.4.2 Post: A successful user profile will be created, shown and stored into the database

3.2.2.4 Related Use Case: N/A

3.2.3 Show new property listing

3.2.3.1 Description: User can view the new property listing.

3.2.3.2 Actor(s): User

3.2.3.3 Conditions

3.2.3.4.1 Pre: User requires to be logged in.

3.2.3.4.2 Post: User will see a new list of properties on the webpage page.

3.2.3.3 Related Use Case: Sign-in user

3.2.4 Flagging a post

3.2.4.1 Description: A post can be flagged by the admin for various reasons like credible information, more information required etc.

3.2.4.2 Actor(s): Admin

3.2.4.3 Conditions:

3.2.4.4.1 Pre: Admin must be logged in.

3.2.4.4.2 Post: Both admin and user will see the flagged post after logged in.

3.2.4.4 Related Use Case: Send e-mail notification and send SMS notification

3.2.5 Send e-mail notification for flagged post

3.2.5.1 Description: User can get flagged post details of the property through e-mail.

3.2.5.2 Actor(s): Admin

3.2.5.3 Conditions:

3.2.5.4.1 Pre: User must have a valid e-mail id

3.2.5.4.2 Post: User will receive an e-mail notification

3.2.5.4 Related Use Case: Flagging a post by Admin

3.2.6 Send SMS notification for flagged post

3.2.6.1 Description: User can get flagged post details of the property through SMS

3.2.6.2 Actor(s): Admin

3.2.6.3 Conditions:

3.2.6.4.1 Pre: User must have a valid phone number.

3.2.6.4.2 Post: User will get an SMS on their phone.

3.2.6.4 Related Use Case: Flagging a post by Admin

3.2.7 Show FAQ's

3.2.7.1 Description: User can see the Frequently Asked Question on website.

3.2.7.2 Actor(s): User

3.2.7.3 Conditions:

3.2.7.4.1 Pre: User can navigate to FAQ webpage use this feature

3.2.7.4.2 Post: User can quickly go through the frequently asked questions for easy navigation and whenever there's a problem while using the website.

3.2.7.4 Related Use Case: N/A

3.2.8. Update User Profile

3.2.8.1 Description: This use case gives the capability for the user to edit their user profile. They can add, delete or, modify the information they have put on their profiles.

3.2.8.2 Actor: User

3.2.8.3 Conditions

3.2.8.4.1 Pre: A user should be signed up first and have a registered account before they can update their profile.

3.2.8.4.2 Post: The user profile would be updated successfully and a pop up will be displayed that the profile has been updated.

3.2.8.4 Related Use Case: Sign up and Sign in

3.2.9 Search Property through keywords (like zip code, state, property type)

3.2.9.1 Description: A user can search a property which they wish to buy/rent according to their needs.

3.2.9.2 Actor: User

3.2.9.3 Conditions

3.2.9.4.1 Pre: A user must be logged in to search any property.

3.2.9.4.2 Post: A user would see their search results.

3.2.9.4 Related Use Case: None

3.2.10 View Detailed Posting

3.2.10.1 Description: This functionality would open the details page of the searched property.

3.2.10.2 **Actor:** User and Admin

3.2.10.3 Conditions

3.2.10.4.1 Pre: A user must be logged in successfully to use this functionality.

3.2.10.4.2 Post: A user would see the details page of their searched property.

3.2.10.3 **Related Use Case:** Search Property

3.2.11 Schedule an Appointment

3.2.11.1 Description: A user can apply for scheduling an appointment with the proper owner/dealer (with email confirmation).

3.2.11.2 Actor: User

3.2.11.3 Conditions

3.2.11.4.1 Pre: A user must be logged in to schedule an appointment. The user must be on the searched property page to schedule an appointment with the dealer/owner.

3.2.11.4.2 Post: An E-mail confirmation will be sent to the user.

3.2.11.4 Related Use Case: None

3.2.12 Request for more property information.

3.2.12.1 Description: A user can request more information on a specific property of their choice from the admin.

3.2.12.2 Actor: User

3.2.12.3 Conditions

3.2.12.4.1 Pre: A user must be on a specific property page to request for more information on that property.

3.2.12.4.2 Post: The user would get the additional information on the property.

3.2.12.4 Related Use Case: None

3.2.13 Recent searched properties.

3.2.13.1 Description: This functionality enables the user to view the most recent searched properties

3.2.13.2 Actor: User

3.2.13.3 Conditions

3.2.13.4.1 Pre: The user must be successfully logged in.

3.2.13.4.2 Post: The most recent searched property will be displayed.

3.2.13.4 Related Use Case: None

3.2.14 Highlight (Special Showcase) property

3.2.14.1 Description: This functionality enables a user to bookmark a property for future reference.

3.2.14.2 Actor: User

3.2.14.3 Conditions:

3.2.14.4.1 Pre: The user must be successfully logged in.

3.2.14.4.2 Post: A user can successfully bookmark a property.

3.2.14.4 Related Use Case: None

3.2.15 Subscribe to newsletter

3.2.15.1 Description- User can subscribe to weekly newsletter through email.

3.2.15.2 Actor(s) - User

3.2.15.3 Conditions

3.2.15.4.1 Pre: User needs to login first.

3.2.15.4.2 Post: The user is successfully subscribed for receiving newsletter.

3.2.15.4 Related Use Case: Unsubscribe to Newsletter.

3.2.16 Unsubscribe from newsletter

3.2.16.1 Description- User can unsubscribe from receiving newsletters through email by just one click.

3.2.16.2 Actor(s) - User

3.2.16.3 Conditions

3.2.16.4.1 Pre: Customer needs to login first.

3.2.16.4.2 Post: The user is successfully unsubscribed from receiving newsletter.

3.2.16.4 Related Use Case: Subscribe to Newsletter.

3.2.17 Update Property Information

3.2.17.1 Description- The admin and user can update his/her property details with “Update Information” tab.

3.2.17.2 Actor(s) - Admin and user

3.2.17.3 Conditions

3.2.17.4.1 Pre: Admin/user needs to login first.

3.2.17.4.2 Post: Admin/user successfully updates the property.

3.2.17.4 Related Use Case: None

3.2.18 Show Surrounding Properties (via Web services (e.g., Zillow))

3.2.18.1 Description- This functionality will allow the user to have a look at the properties surrounding his/her selected property.

3.2.18.2 Actor(s) - User

3.2.18.3 Conditions

3.2.18.4.1 Pre: User needs to select at-least one of the property listed.

3.2.18.4.2 Post: User successfully views all the surrounding properties.

3.2.18.4 Related Use Case: None

3.2.19 Show Property on google maps

3.2.19.1 Description- This functionality will allow the user to have a look at the geographical map of the whole area in which the selected property is located.

3.2.19.2 Actor(s) - User

3.2.19.3 Conditions

3.2.19.4.1 Pre: User needs to select at-least one of the property listed.

3.2.19.4.2 Post: User successfully views the whole locality and nearby places.

3.2.19.4 Related Use Case: None

3.2.20 Regular Property Listing

3.2.20.1 Description- This functionality will enable the admin to download the most recent listing of all the properties in pdf format.

3.2.20.2 Actor(s) - Admin

3.2.20.3 Conditions

3.2.20.4.1 Pre: Admin needs to login first.

3.2.20.4.2 Post: Admin successfully downloads the most recent property listing.

3.2.20.4 Related Use Case: None

3.2.21 Reports generation (e.g., most viewed properties, most request-for-info properties, etc.)

3.2.21.1 Description- This functionality will enable the admin to view an auto generated report. The report will be generated once in every month.

3.2.21.2 Actor(s) - Admin

3.2.21.3 Conditions

3.2.21.4.1 Pre: Admin needs to login first.

3.2.21.4.2 Post: Admin successfully views the generated report.

3.2.21.4 Related Use Case: None

3.2.22 Retrieve lost password

3.2.22.1 Description: This functionality will allow user to retrieve password. The password would be received in the user's registered email.

3.2.22.2 Actor(s): User

3.2.22.3 Conditions

3.2.22.4.1 Pre: User doesn't need to be logged in.

3.2.22.4.2 Post: User will receive the password in their email account.

3.2.22.4 Related Use Case: Sign-Up user

3.2.23 Compare Properties

3.2.23.1 Description: If a user wants to compare two properties then he can use this feature.

3.2.23.2 Actor(s): User

3.2.23.3 Conditions:

3.2.23.4.1 Pre: User must be logged in.

3.2.23.4.2 Post: User will see two properties side by side.

3.2.23.4 Related Use Case: Search Property

3.2.24 Share on social media(Facebook)

3.2.24.1 Description: Property details can be shared with this use case

3.2.24.2 Actor(s): User

3.2.24.3 Conditions:

3.2.24.4.1 Pre: User must be logged in. A property should be selected to share on social media

3.2.24.4.2 Post: Details of the property will be posted on social media

3.2.24.4 Related Use Case: N/A

3.2.25 Give star rating to property

3.2.25.1 Description: A property can be given feedback by the user in form of star ratings.

3.2.25.2 Actor(s): User

3.2.25.3 Conditions:

3.2.25.4.1 Pre: User must be logged in.

3.2.25.4.2 Post: User would be able to give star ratings and the ratings would be visible.

3.2.25.4 Related Use Case: N/A

3.2.26 Confirm email registration

3.2.26.1 Description: New users can create their account and confirm their email id.

3.2.26.2 Actor(s): User

3.2.26.3 Conditions:

3.2.26.4.1 Pre: User must fill the registration form and give a valid email id.

3.2.26.4.2 Post: User will be redirected to his account

3.2.26.4 Related Use Case: SMS confirmation

3.2.27 Send SMS confirmation

3.2.27.1 Description: New user can get the account confirmation details by SMS

3.2.27.2 Actor(s): User

3.2.27.3 Conditions:

3.2.27.4.1 Pre: User must fill the registration form and give a valid phone number

3.2.27.4.2 Post: User will get SMS on their phone

3.2.27.4 Related Use Case: Email Confirmation

3.2.28 Mark a property as “favorite”

3.2.28.1 Description: A property that interests the user can be made favorite

3.2.28.2 Actor(s): User

3.2.28.3 Conditions:

3.2.28.4.1 Pre: User must be logged in. User must be on the desired property’s page.

3.2.28.4.2 Post: A property would have a favorite mark on it.

3.2.28.4 Related Use Case: N/A

3.2.29 Filter and sort by functionality

3.2.29.1 Description: User can filter and sort the search results based on several criteria/factors like number of baths, bedrooms, price etc.

3.2.29.2 Actor(s): User

3.2.29.3 Conditions:

3.2.29.4.1 Pre: User must be logged in. User must select the filter/sort by option for viewing search results.

3.2.29.4.2 Post: The search results should be displayed based on the selected factors.

3.2.29.4 Related Use Case: N/A

3.2.30 Submit an application for tenancy by the user.

3.2.30.1 Description: User can submit an application for tenancy on the website.

3.2.30.2 Actor(s): User

3.2.30.3 Conditions:

3.2.30.4.1 Pre: User must be logged in. User must be on the “Application for tenancy page”. All the required details should be filled by the user.

3.2.30.4.2 Post: The application for tenancy will be successfully submitted.

3.2.30.4 Related Use Case: N/A

3.2.31 Post a query on the website regarding a property.

3.2.31.1 Description: User can post a query related to any property on the website.

3.2.31.2 Actor(s): User

3.2.31.3 Conditions:

3.2.31.4.1 Pre: User must be logged in. User must post a query with his contact information.

3.2.31.4.2 Post: The query acknowledge message will be displayed on the webpage.

3.2.31.4 Related Use Case: N/A

3.2.32 View “Need Sub leaser” listing on the website.

3.2.32.1 Description: User can view “Need sub leaser” listing on the website.

3.2.32.2 Actor(s): User

3.2.32.3 Conditions:

3.2.32.4.1 Pre: User must be logged in. User must be on the “Need sub leaser” webpage.

3.2.32.4.2 Post: A list of required sub leaser will be displayed.

3.2.32.4 Related Use Case: N/A

3.2.33 View “Need roommate” listing on the website.

3.2.33.1 Description: User can view “Need roommate” listing on the website.

3.2.33.2 Actor(s): User

3.2.33.3 Conditions:

3.2.33.4.1 Pre: User must be logged in. User must be on the “Need roommate” webpage.

3.2.33.4.2 Post: A list of required roommates will be displayed.

3.2.33.4 Related Use Case: N/A

3.2.34 Apply for career/employment options on the website.

3.2.34.1 Description: User can view the career/employment options on the website. They can post their resume for a position.

3.2.34.2 Actor(s): User

3.2.34.3 Conditions:

3.2.34.4.1 Pre: User must be logged in. User must be on the “career” webpage.

3.2.34.4.2 Post: A list of available career options should be displayed. The users can apply for any position online.

3.2.34.4 Related Use Case: N/A

3.3 Non-Functional Requirements

3.3.1 Performance: The product shall be based on web and must run from a web server. The product shall take initial load time depending on internet connection strength which also depends on the media (desktop/tab/mobile) from which the product is run. The performance shall depend upon hardware components of the client/customer.

3.3.2 Reliability: The information on the website will be fully creditable and up to date.

3.3.3 Availability: The website is available for all users for 24x7. There is zero downtime anticipated for the users.

3.3.4 Security: The website is secured with treating all user’s data as confidential. We are not providing any additional security for the database. We are using the operating system’s firewall for this website.

3.3.5 Maintainability: The website will be updated on regular basis (such as quarterly), depending on the needs and advancement in the real estate line of business.

3.3.6 Portability: The design of the website is highly portable and compatible with other technologies/systems as it is highly standardized website.

3.4 Design Constraints

The website is designed keeping in mind the GRASP principles but there is no dedicated plug-in available for creating design diagrams in Eclipse IDE. All design diagrams have been created using Visio.

3.5 Other Requirements

4. Design & Development

This website is created using AGILE methodology (SCRUM). The reason for choosing agile over waterfall model is that we are going for iterative and incremental approach rather than a big-bang approach. The approach is to build on a requirement and refine it in iterations. We are targeting to have a simultaneous development and testing for a requirement which will save time

and effort to find the defects and correct them in the code. This flexibility is very difficult to achieve in waterfall model; hence we have followed the agile methodology.

4.1 Software Process Model

4.1.1 Introduction

This section will provide an overview of the process model chosen and project timelines with respect to each sprint.

4.1.2.1 Plan Description

The process model we have chosen for the development of our application is the Iterative & Incremental Model (IIM). This is a model that will grow our application incrementally through iterations (Sprint 1, 2, 3 and 4) using various phases. We thought this would be a perfect fit for our application as we can divide each sprint and follow this cycle of planning, design, implementation, testing, and evaluation beginning of the start of each. Each iteration/sprint will last 2 weeks long.

We plan to meet on weekdays at 12noon for a daily standup meeting to discuss about the progress of work on the project. In addition to this, we are using a Kanban online tool (<https://kanbantool.com/online-kanban-board>) for keeping track on the user stories and the time elapsed. We will also be meeting on Tuesdays and Thursdays from 6 P.M. to 9 P.M. beginning at the start of the sprint, we will begin by planning and designing the specifications designated on the sprint schedule. Once that is done, we will begin implementing these new features and deploy them. We will then test these features near the end of the sprint and evaluate the system to conclude.

4.1.2.1 Plan Diagram

Below is a high-level project plan diagram:

4.2 Overall Architecture

4.3 Sprint 1

4.3.1 Description

This sprint is dedicated to finalizing the design diagrams and class structure of the website. In addition to that creating of database is also included in this sprint. From the design perspective, we have worked on how the customer interacts with property class.

4.3.2 Satisfying Requirements

This sprint mainly covers the design for a customer and property class. We have tried to touch various requirement though not completed as yet. The following are the requirement numbers:

Requirement ID	Description
3.2.8	Update User Profile
3.2.9	Search Property through keywords (like zip code, state, property type)
3.2.10	View Detailed Posting
3.2.11	Schedule an Appointment
3.2.15	Subscribe to newsletter
3.2.16	Unsubscribe from newsletter
3.2.17	Update Property Information
3.2.30	Submit an application for tenancy by the user.
3.2.34	Apply for career/employment options on the website.

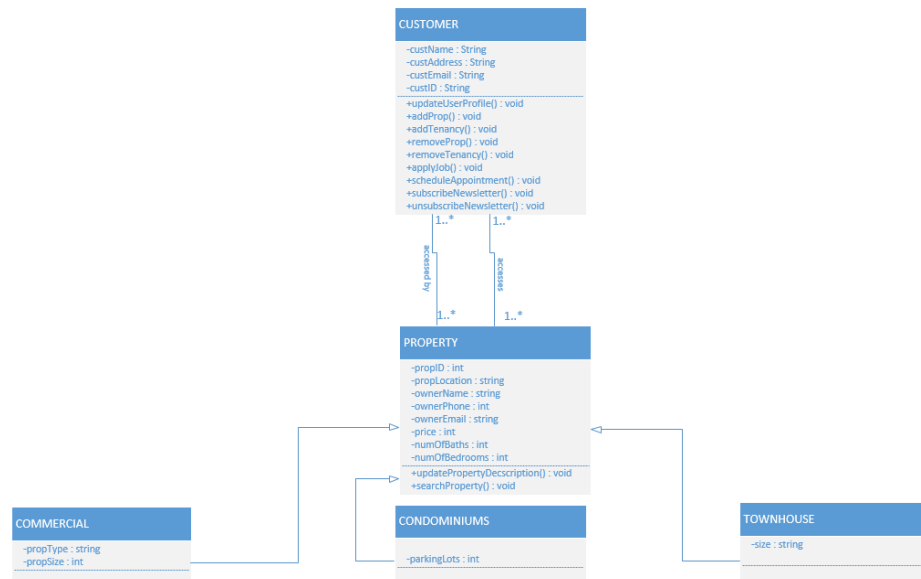

4.3.3 Design

4.3.3.1 Standards, Frameworks and Tools

We used Microsoft Visio Professional 2013 for creating class diagrams.

4.3.3.2 Class Diagram

Below is the class diagram which focuses on the relation between customer and property class:

The customer class can access the property class. One or more customers can access one or more properties. The customer can add a property, remove a property, search a property. Similarly, one or more properties can be accessed by one or more customers. The property class has three child classes namely, “commercial”, “condominiums” and “townhouse”.

4.3.4 Development

4.3.4.1 Description

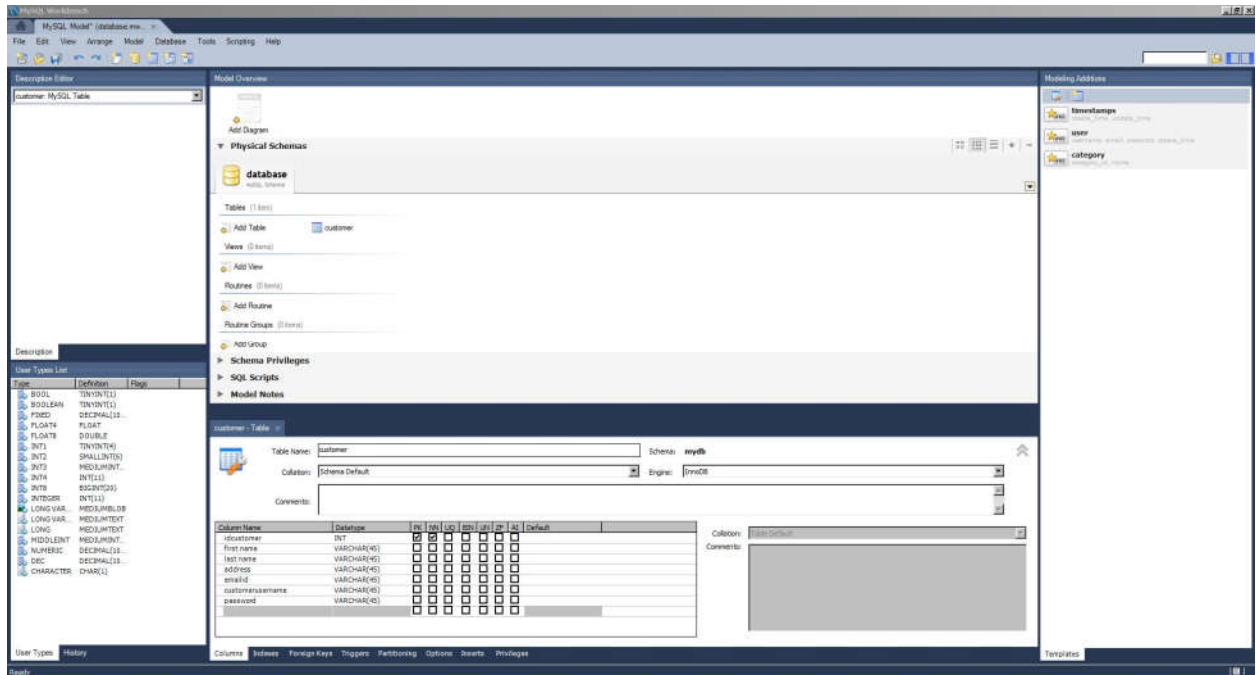

In this sprint, we are targeting to complete the database creation which includes the schema and various tables. We have tried to implement the normalization concepts which building up our database.

4.3.4.2 Standards, Frameworks and Tools

For the creating the database, we used MySQL Workbench 6.3 in order to create the schema and tables we needed.

4.3.4.3 Screenshots

Below is a screenshot from MySQL Workbench where we have created a “customer” table:

4.4 Sprint 2

4.4.1 Description

In this sprint we are targeting to complete the login, register/sign up a new user, verify a user and retrieve lost password requirements. We have tried to implement the login and sign-up forms using Servlets, MySQL and JSP. We have also used HTML and CSS for styling of the pages. So basically, the user would be able to successfully login to the website, can register if he is not having the login credentials and can retrieve the password in case the password is forgotten or lost.

4.4.2 Satisfying Requirements

We have tried to touch various requirement though not completed as yet (the styling and look enhancement of the pages is still in progress). The following are the requirement numbers:

Requirement ID	Description
3.2.1	Sign-in User
3.2.2	Sign up/Register user
3.2.22	Retrieve lost password
3.2.26	Confirm email registration (on sign up)

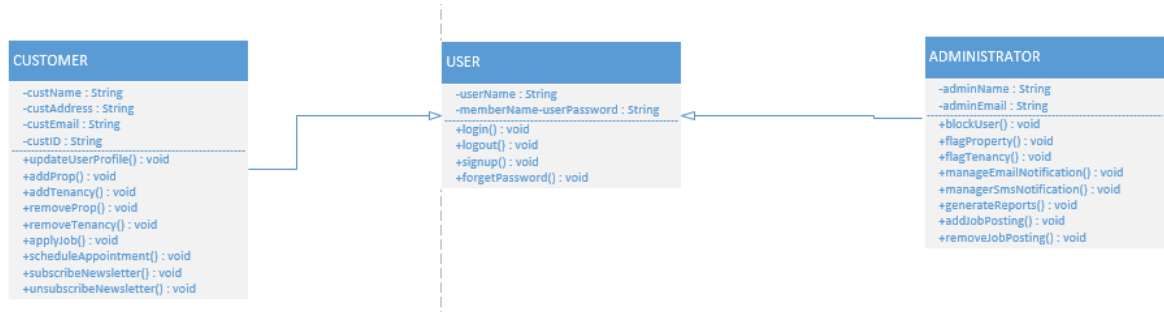

4.4.3 Design

4.4.3.1 Standards, Frameworks and Tools

We have used “lucid chart” tool for creating the activity diagram for this sprint. UML standards are followed in designing the features of this sprint.

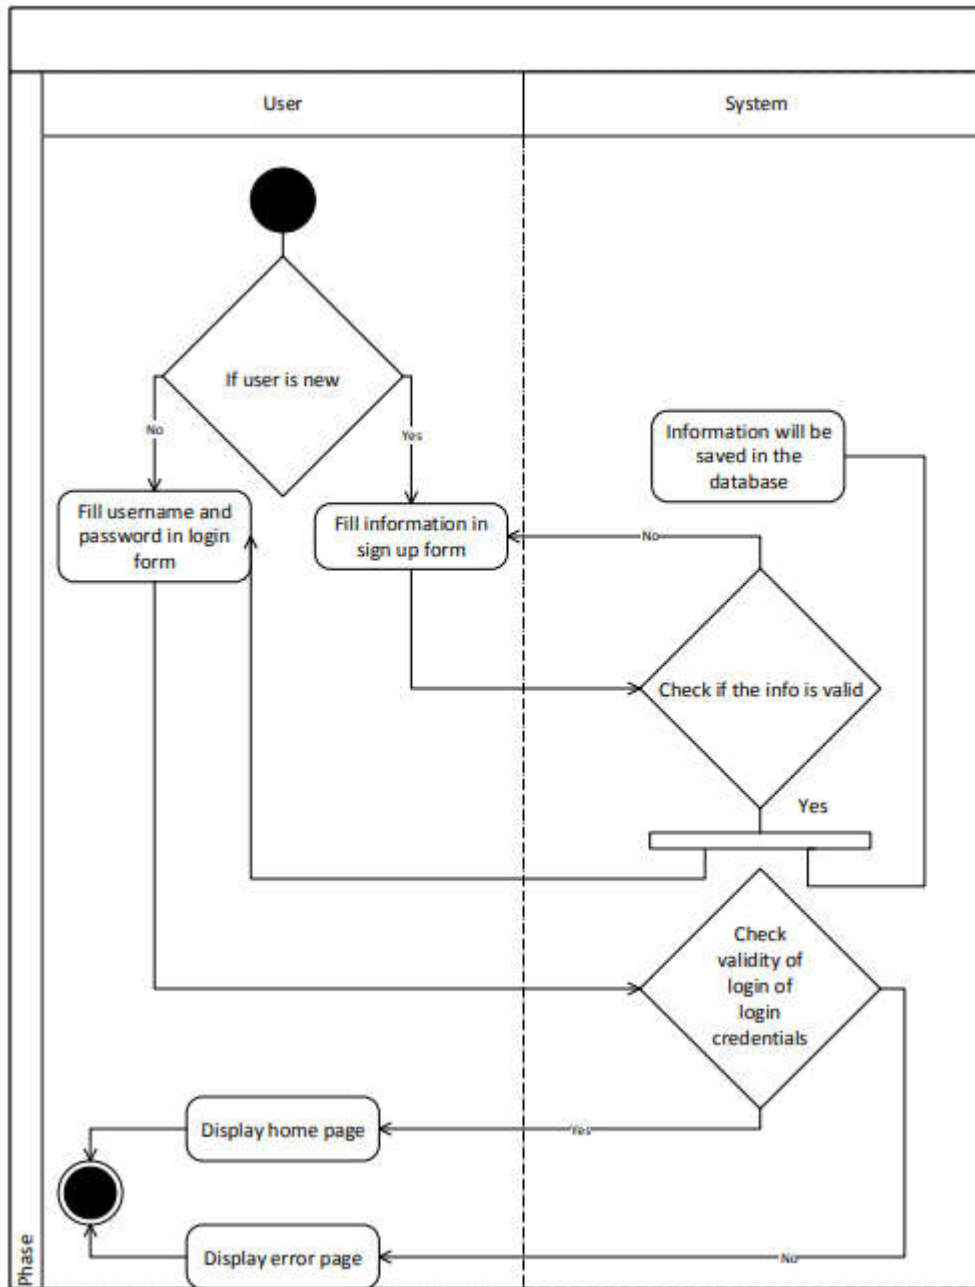

4.4.3.2 Class Diagram

Below if the class diagram which has the sprint-2 features:

We have mainly targetted the USERS class in this sprint which has features like login, logout, signup and forgetpassword.

4.4.3.3 Activity Diagram

4.4.4 Development

4.4.4.1 Description

We have created login and sign-up forms using Servlets, MySQL and JSP.

4.4.4.2 Standards, Frameworks and Tools

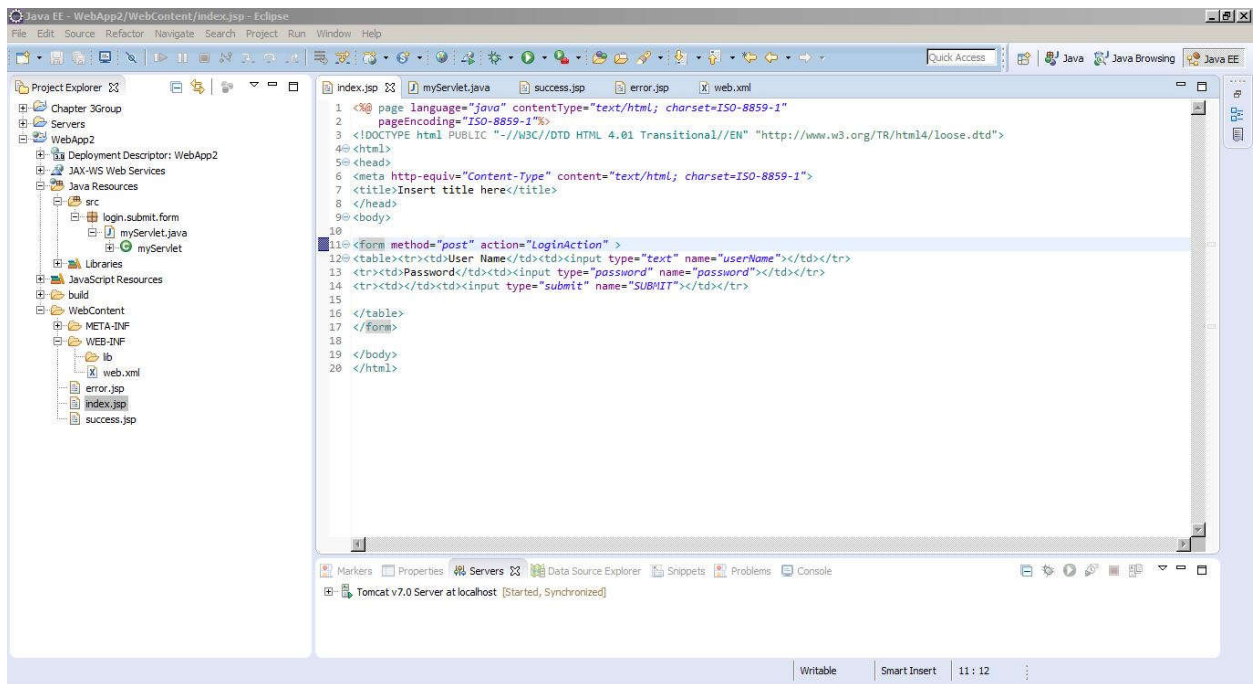

For developing the features, we have used the following:

Property Buy and Sell Website – Software Requirement Specifications

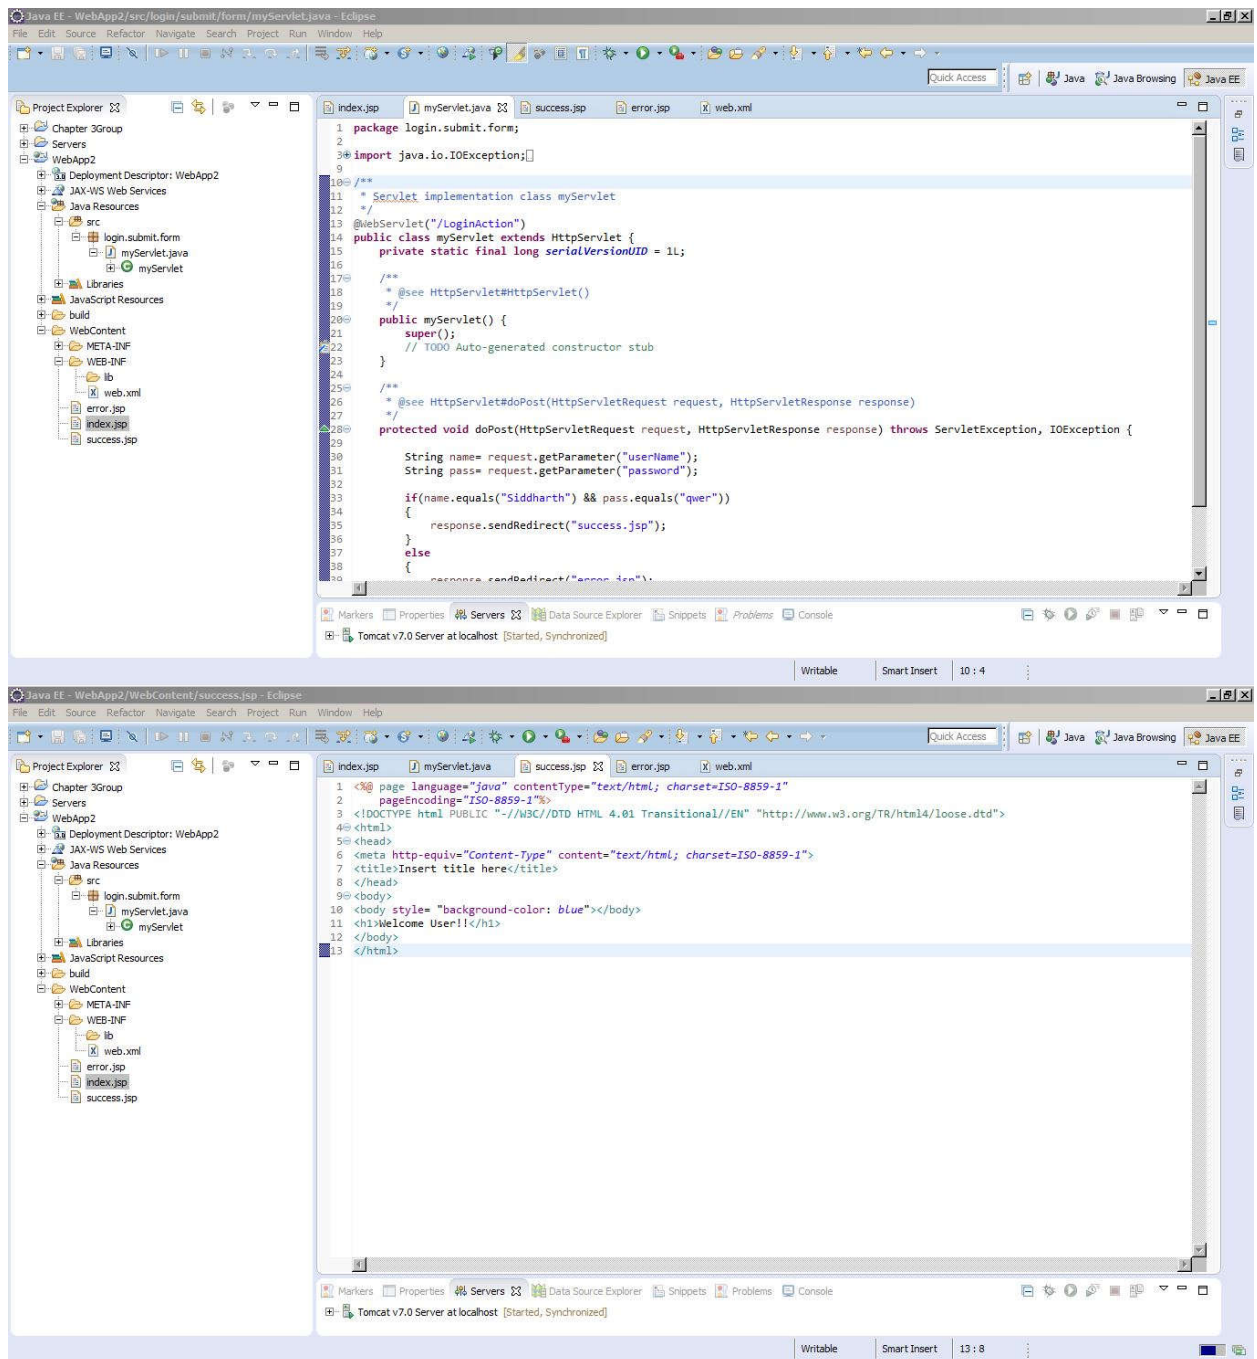

- Eclipse Java EE IDE for Web Developers: for creating java classes, jsp pages, servlets and other front-end files.
- Tomcat v7.0 server: Apache Tomcat is used to deploy your Java Servlets and JSPs
- MySQL Workbench: To create the schema and tables we needed

4.4.4.3 Screenshots

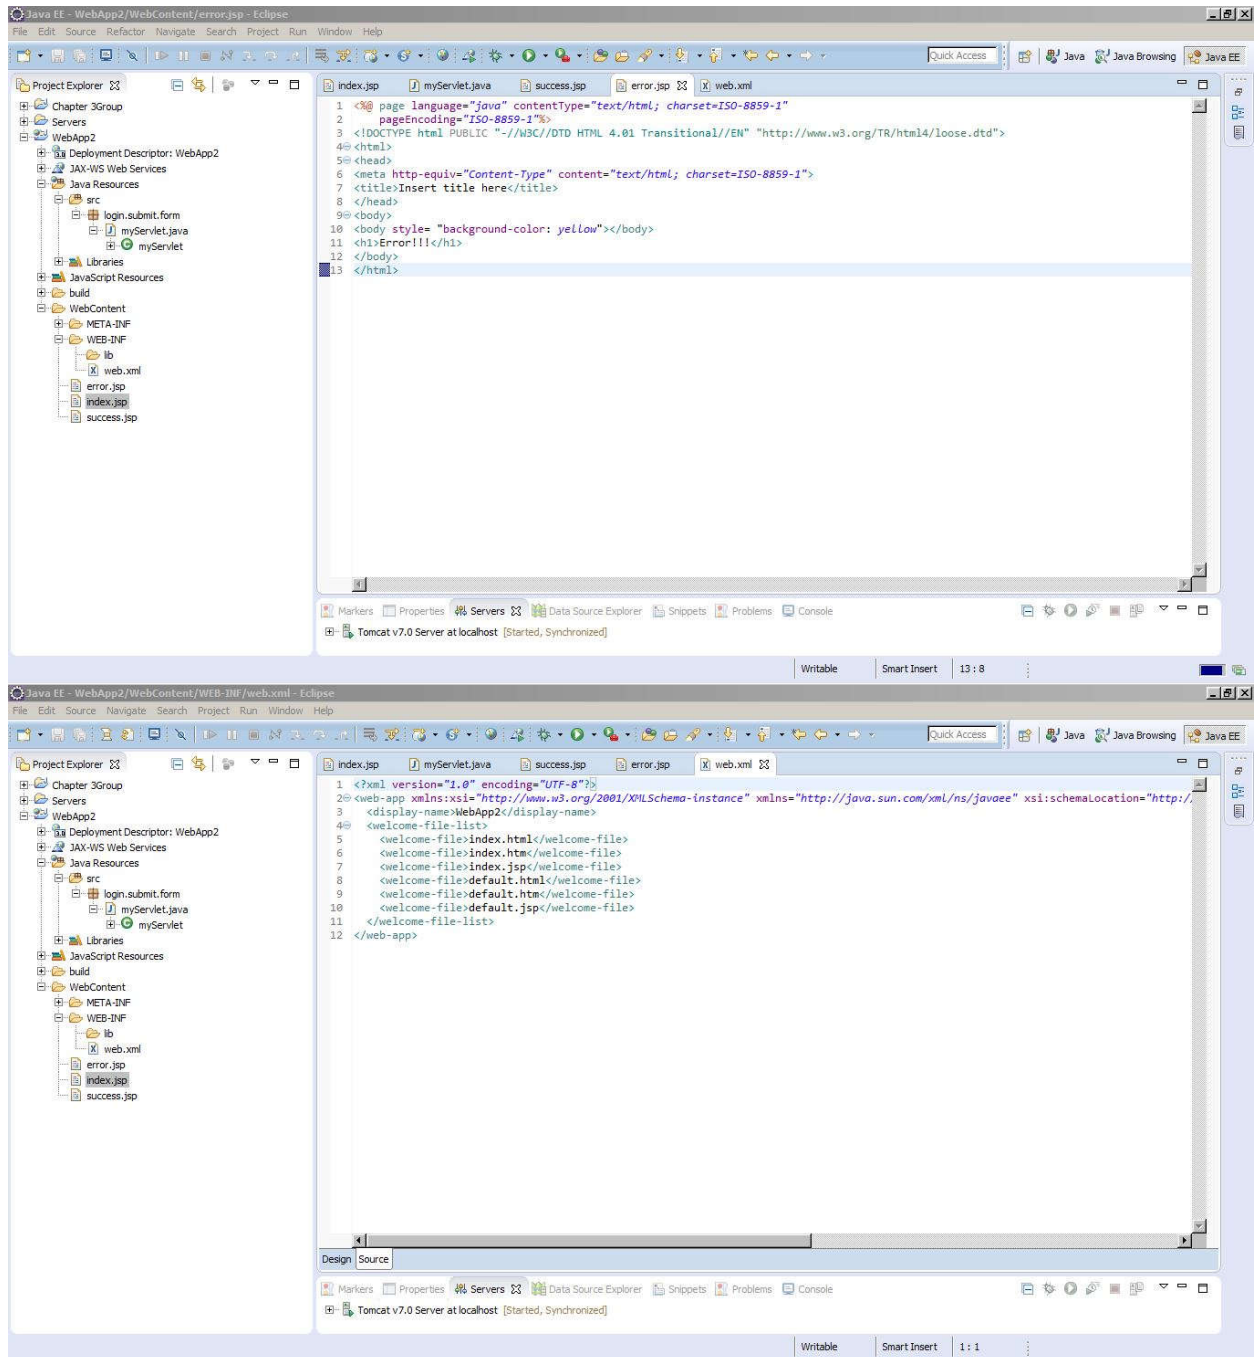

Below are the screenshots to show a “login functionality java code” (mainly JSP and servlet files):

4.5 Sprint 3

4.5.1 Description

In this sprint we are targeting to complete filter functionality and to design the User Interface and styling of the webpages.

4.5.2 Satisfying Requirements

We have tried to touch various requirement though not completed as yet (the styling and look enhancement of the pages is still in progress). The following are the requirement numbers:

Requirement ID	Description
3.2.29	Filter and sort by functionality
3.2.9	Search Property through keywords (like zip code, state, property type)

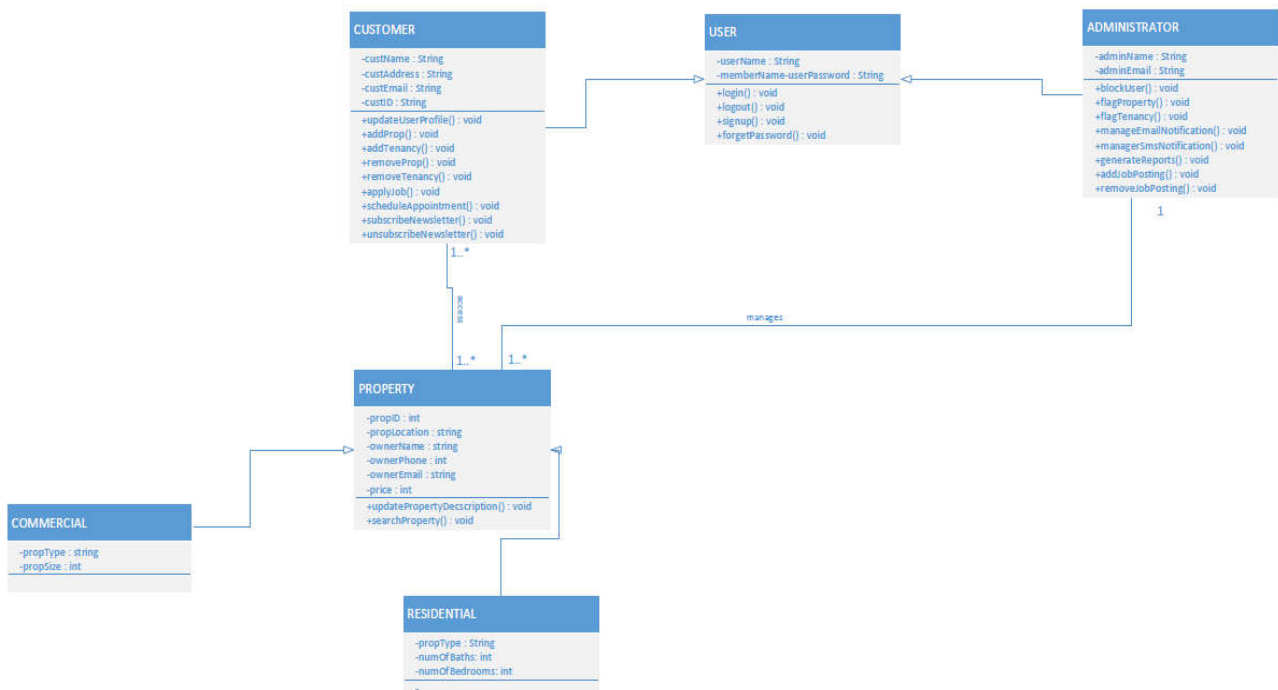

4.5.3 Design

4.5.3.1 Standards, Frameworks and Tools

We have used “lucid chart” tool for creating the activity diagram for this sprint. UML standards are followed in designing the features of this sprint.

4.5.3.2 Class Diagram

Below is the class diagram of the requirements that we have covered in this sprint:

We have targetted the search functionality here. (searchProperty(): void)

4.5.4 Development

4.3.4.1 Description

We have created login, sign-up forms and homepage using bootstrap (HTML and CSS styling), Servlets, MySQL and JSP.

4.3.4.2 Standards, Frameworks and Tools

For developing the features, we have used the following:

- o Eclipse Java EE IDE for Web Developers: for creating java classes, jsp pages, servlets and other front-end files.
- o Tomcat v8.5 server: Apache Tomcat is used to deploy your Java Servlets and JSPs
- o MySQL Workbench: To create the schema and tables we needed

4.6 Sprint 4

4.6.1 Description

This subsection of the SRS document provides brief description of this sprint, its activities and achievements.

4.6.2 Satisfying Requirements

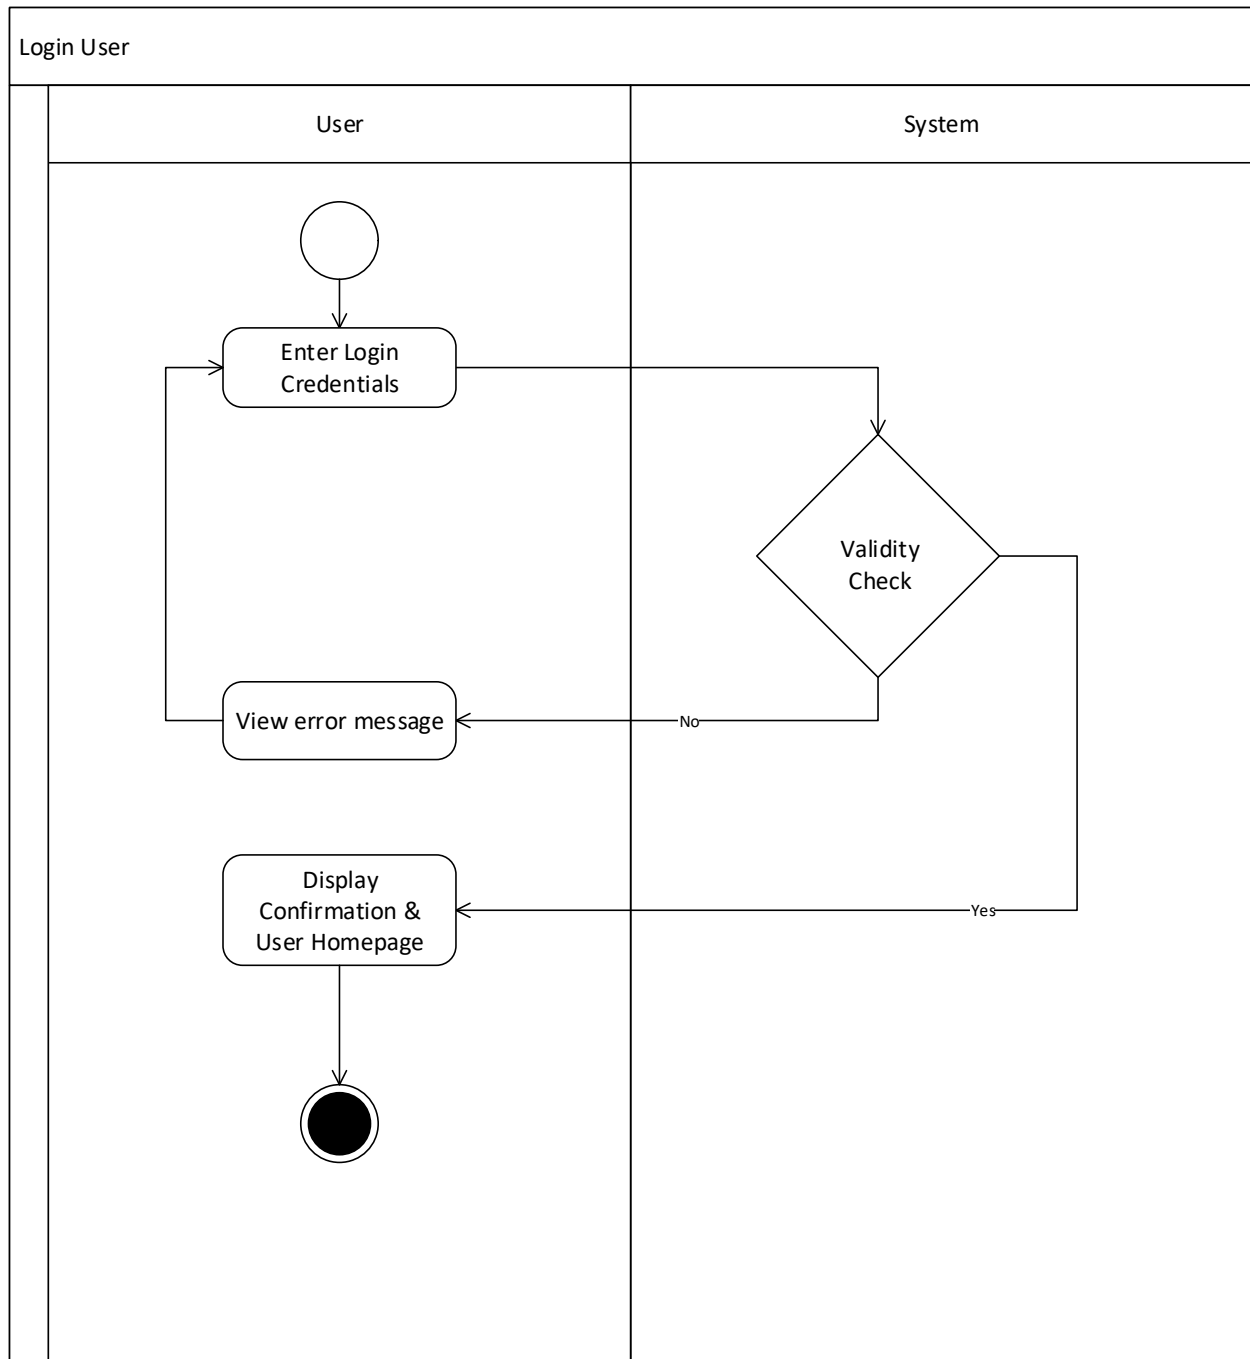

Specify the requirements, (i.e. the requirement number) that are satisfied in this sprint. The requirement number must match the one in Section 3.2.

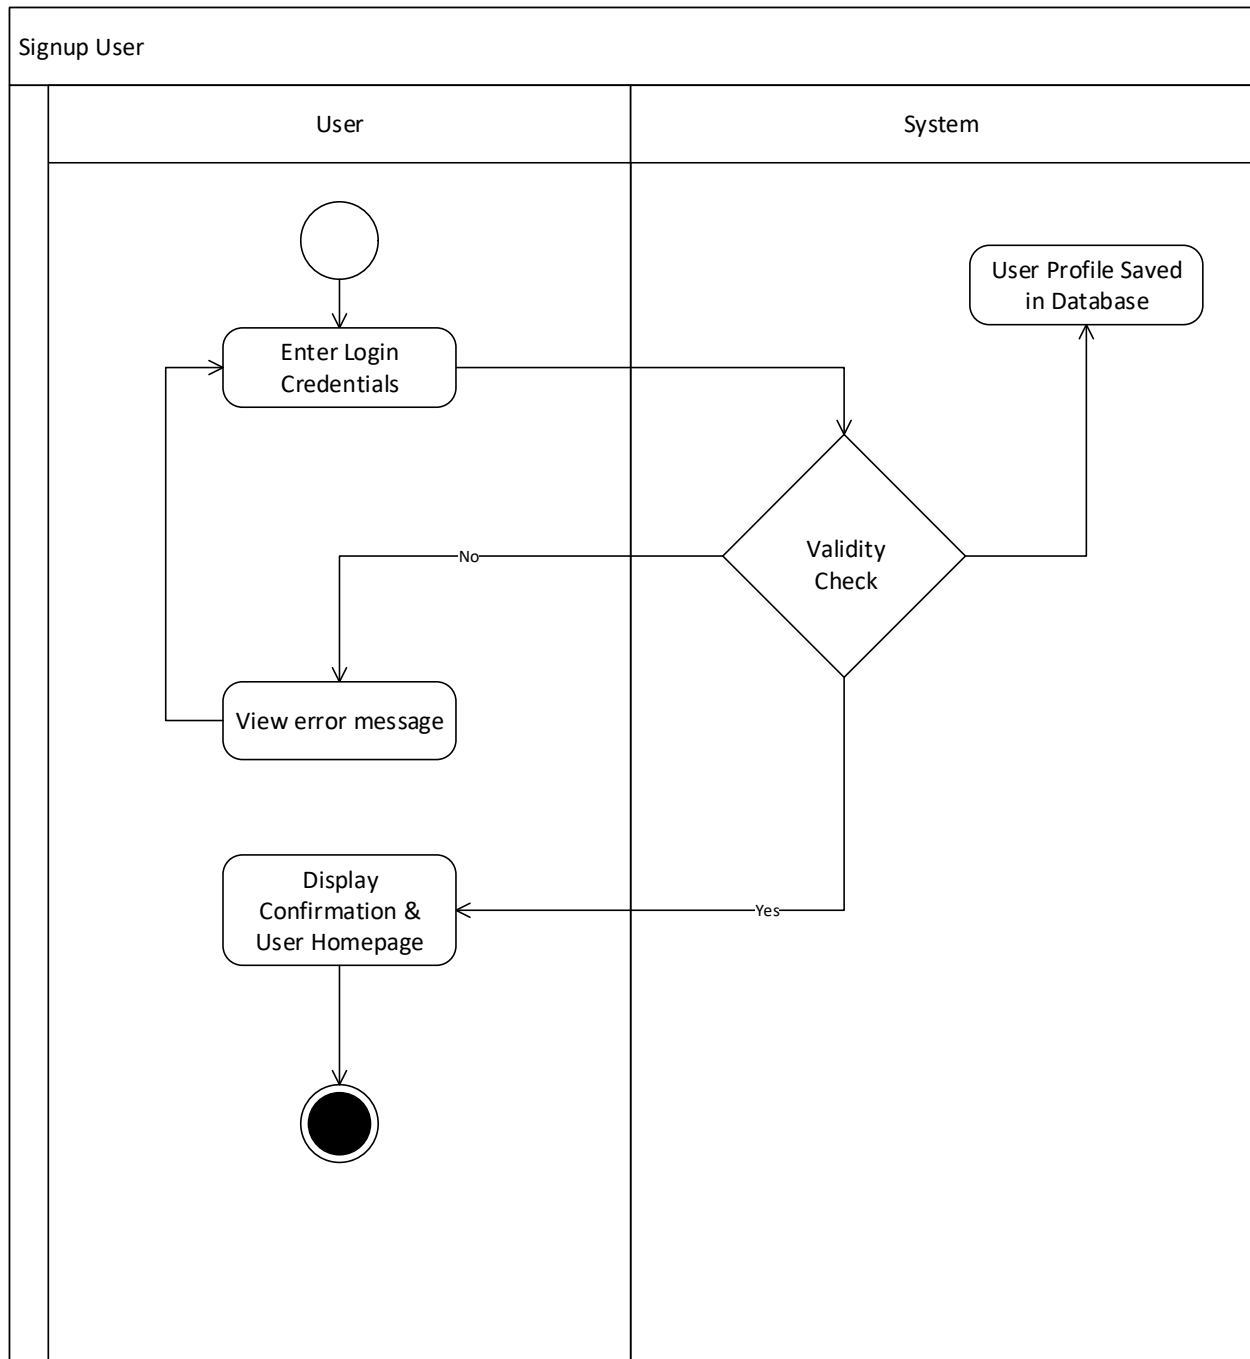

4.6.3 Design

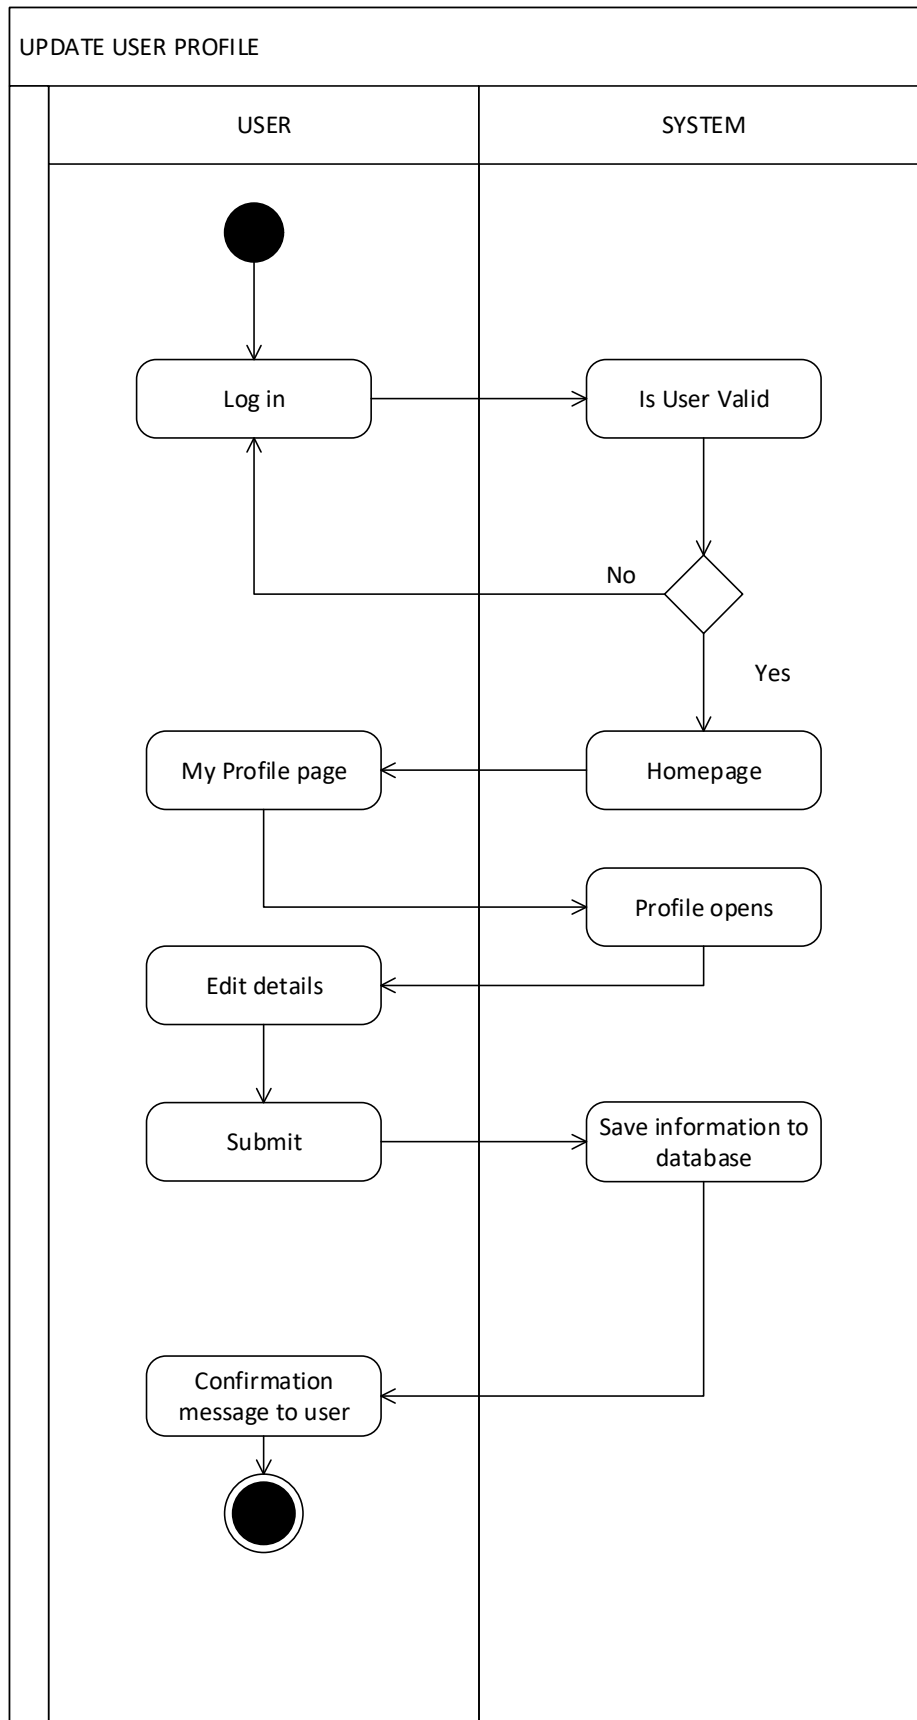

4.6.3.1 Standards, Frameworks and Tools

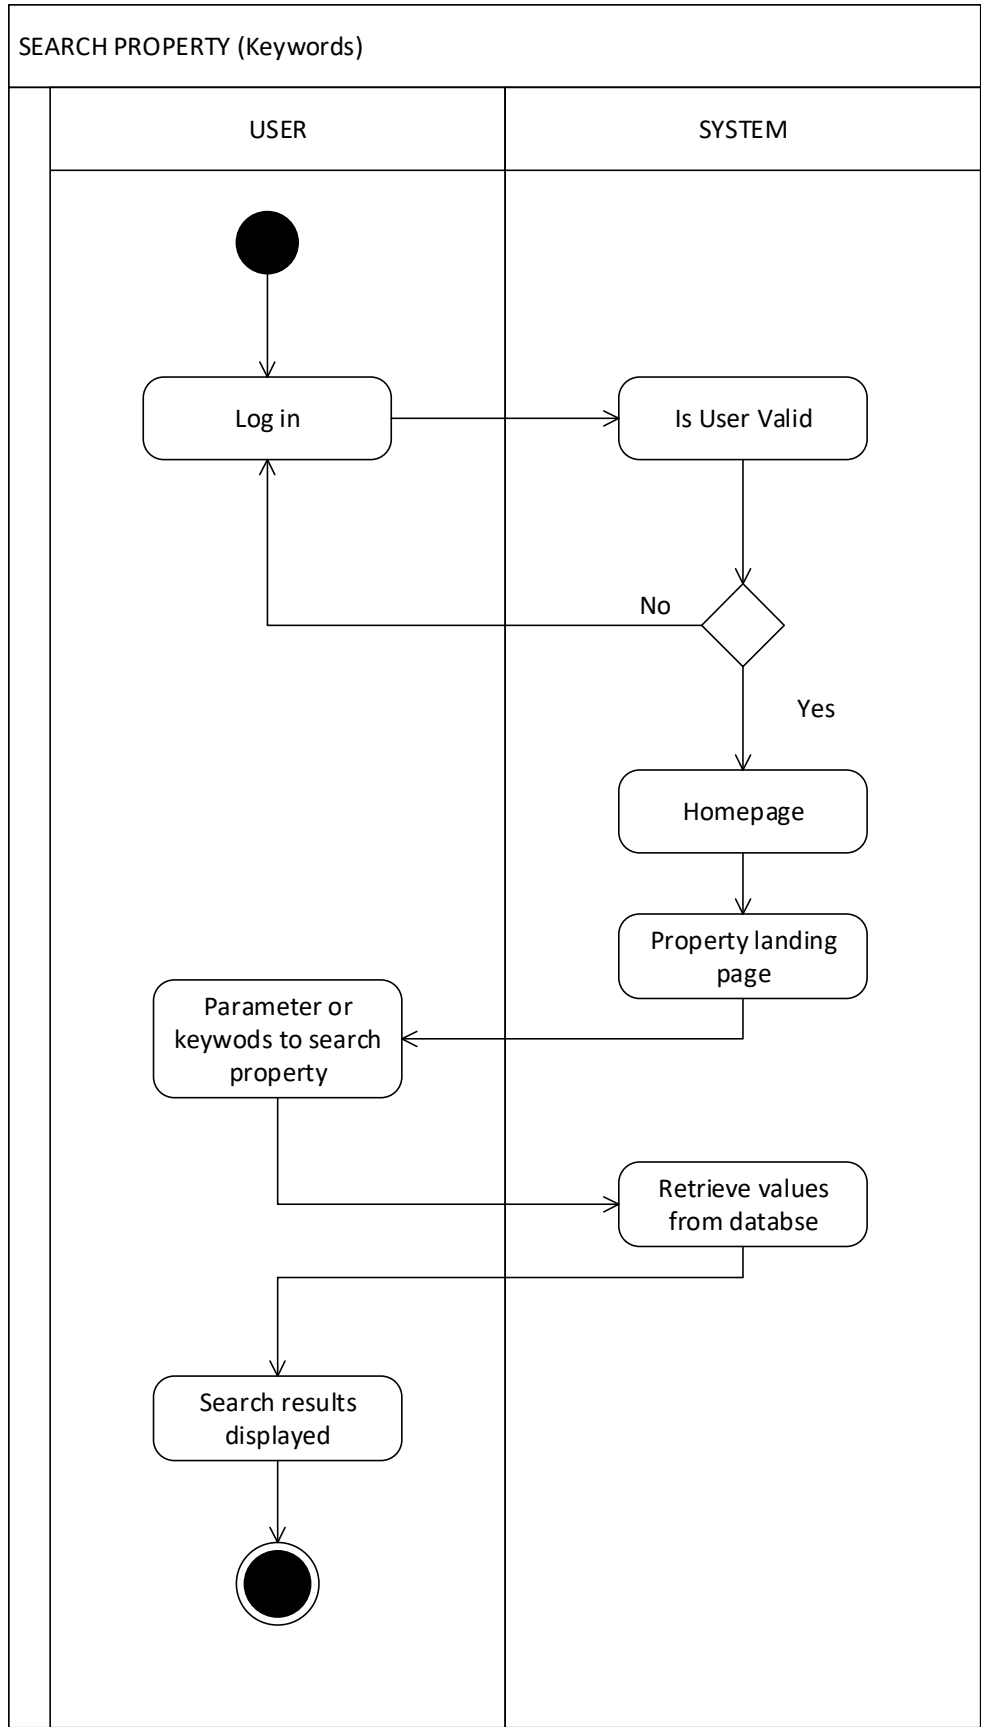

4.6.3.2 Class Diagram
